Sam Okafor

Senior Product Manager, Data

Leeds, UK | sam.okafor@example.com | linkedin.com/in/sam-okafor-example

- **Own the roadmap for the new data products line**: ✓ I own the roadmap for Tidewater Insights at Larkspur Systems, taken from discovery to production in three NHS trusts with 1,200 weekly active clinicians.
- **5+ years of product management, 2+ in data products**: ✓ Product manager since 2019, all of it on data products: forecasting at Tidewater Freight, clinical reporting at Larkspur.
- **Shipping into hospitals or a regulated environment**: ✓ Three NHS trusts live, with information governance reviews passed on first submission in each.
- **Work directly with data engineers and data scientists**: ✓ I specified the telemetry pipeline behind Tidewater Freight's forecasting model and the 40-feed data quality layer at Larkspur.
- **Define and track adoption and outcome metrics**: ✓ Activation, weekly active use and time-to-insight are reviewed weekly; median report turnaround for ward managers went from 6 days to same day.
- **Stakeholder management with clinical and operational leaders**: ✓ Ran prototype-based discovery with ward managers across three trusts, validating 5 report types and killing 3 before build.
- **SQL and data models**: ✓ I write the first SQL on every discovery and review schema changes with the data engineers.
- **NHS procurement (nice to have)**: ✓ Led three NHS framework bids at Larkspur, winning two.
- **Forecasting features (nice to have)**: ✓ Shipped a demand-forecasting feature that lifted fleet utilisation by 11%, the same shape of problem as bed-management forecasting.
